

User manual — KINEVA FIT

Language: English · Fallback for all non-Italian app locales.

Document version: 2.10 · **Date:** 17 September 2026

Platforms: Android · iPhone · iPad · Apple Watch

Docs index: `docs/README.md`

Operational guide: `guida_operativa_percorsi.md` v1.4 (Index + Reference guide + §1–§15; Free has no distance/GPS)

In-app (all plans, including Free): Settings → Base → *Guides and help* → User manual / Operational guide.

Public pages: `https://maufer58.github.io/KINEVA-FIT_LandingPage/guides/` (after `./tool/publish_user_guides.sh` + landing sync).

Quick index

§	Contents
0	Development install (Mac)
1–2	What KINEVA FIT is · First launch
3–6	Home, clients, plans, editor, runner
7–12	Watch, AI, calendar/history, settings, issues, support
13	Trainer area / Studio & Gym
14	Operational guide with menu paths (all features)
—	Full version: <code>guida_operativa_percorsi.md</code> (Index + Reference guide + §1–§15)

0. Development install (Mac)

Recommended project folder: KINEVA (not Stride / MOVEFitness). The same script also renames Stride_Policy → KINEVA-FIT_Policy , Stride_LandingPage → KINEVA-FIT_LandingPage , and Stride_Backups → KINEVA-FIT_Backups under ~/Documents :
./tool/rename_mac_project_dir.sh .

Device/simulator build: ./fit.sh (or ./KINEVA-FIT.sh). Official GitHub origin: <https://github.com/Maufer58/KINEVA-FIT.git> . Keep Mac ↔ GitHub aligned on the latest version and also update Privacy/EULA + landing on GitHub Pages. Details in README.md and ios/Signing/SIGNING.md .

To install on the paired Apple Watch: in the menu choose **iPhone + Watch** (not iPhone only). The watch must be unlocked, nearby, with **Developer Mode** enabled (Watch → Settings → Privacy & Security).

If the script says the iPhone is OK but the Watch is not (often tunnel=disconnected): **iPhone → Watch app → My Watch → KINEVA FIT → Install**. Then, if you still need the Mac tunnel:
./ios/scripts/install_iphone_watch.sh --watch-only --skip-git-sync .

If you see **Developer Disk Image / CoreDevice 12040 / 0xe8000076** ("Could not support development" / "developer disk image could not be mounted"): **this is not a KINEVA FIT build error**. The iPhone is already installed; only the **direct Mac → Watch** install fails.

Why it "used to work" and now does not: Xcode / watchOS updates made mounting a matching *Developer Disk Image* (DDI) on the Watch over wireless mandatory. If Developer Mode is incomplete, the DDI does not match, or CoreDevice times out, Xcode rejects the install. The **companion** path (iPhone → Watch app → KINEVA FIT → Install) **does not use the Mac DDI** and remains the reliable route.

In order:

1. Watch → Settings → Privacy & Security → **Developer Mode = ON**, confirm the prompt, **restart** the watch.
 2. Simplest path (no Mac DDI): **iPhone → Watch app → KINEVA FIT → Install**, then open KINEVA FIT on the Watch once.
 3. If you still need a Mac install: align Xcode / watchOS support (Xcode → Settings → Platforms), then --watch-only . Do not retry the same command until you complete steps 1–2.
- With ./fit.sh iPhone+Watch, if the DDI fails the script still leaves **iPhone OK** (exit 0) and points you to the companion path.

If iPhone/iPad install fails with **CoreDevice error 1011** / `DeviceIdentifier: ecid_*` :

1. **Unlock** the device, screen on, **USB** cable, “Trust”, **Developer Mode ON**.
2. Check: `xcrun xctrace list devices` — the `00008...` UDID must appear (not only `ecid_...`).
3. Then, **without rebuilding**: `ENABLE_DEV_MENU=true PRODUCER_PASSWORD='MOVE2026' ./fit.sh -install-only`.

The build may already be fine (SprayTuna/other devices installed): the error is only CoreDevice reachability.

If the Watch fails (`tunnel=disconnected` / Bluetooth timeout / DDI 12040): unlock the watch, Developer Mode ON (+ restart), keep it near the iPhone; or **iPhone** → **Watch** → **KINEVA FIT** → **Install**. Then `./ios/scripts/install_iphone_watch.sh --watch-only --skip-git-sync`.

Apple “workouts on their own” on the Watch: KINEVA FIT sessions (after **START**) create a real `HKWorkout` in Fitness (source KINEVA FIT). It is not Apple’s Workout app starting by itself. Turn off **Auto-start Workout** in Watch → Workout if native Apple workouts start without KINEVA FIT. Calendar alerts only open the routine preview after a tap (they do not start HealthKit).

The **KINEVA FIT** complication does not appear on the face by itself: after opening KINEVA FIT on the Watch, long-press the face → Edit → choose **KINEVA FIT**. (**KINEVA Intervals** is a separate app: its complications appear only if you install that app.)

1. What KINEVA FIT is

KINEVA FIT is a **workout and routine management** app: you create or import workouts, run them on iPhone or Watch, keep history, and (on Pro plans) manage multiple athletes.

It is not a medical device. “Areas of attention” are training preferences, not diagnoses.

2. First launch

1. Accept the **Privacy Policy** and **EULA** (required: open them and check “I have read”).
 2. Accept the training disclaimer.
 3. Complete onboarding (language, basic profile).
 4. (Optional) Start the trial or pick a plan from the paywall.
-

3. Home and routines

In the header, under the KINEVA FIT title, you see: **plan · active user role** (Athlete / Trainer · name / Supervisor) · **Active client**. The role is also at the top of the drawer (). Full paths: **\$14**.

- **New routine:** Home → New Routine → Manual editor, AI Wizard, import from photo, template library, free workout.
- **Groups:** organize multiple routines under a group name.
- **Tap ► on a routine:** opens the runner.
- **Routine menu (⋮):** duplicate, archive, save as template (non-Free plans), schedule, **Export Program, Send to Apple Watch** (single routine, Athlete Pro+).

Export Program (PDF / image)

From the routine ⋮ menu → **Export Program**. First choose **how to send it**, then the format.

Channel (always, after choosing the format):

Channel	What it does
Save file	Visible copy on the device (Download / Documents). On Android/desktop you can pick the folder.
Email	Opens share to attach the file; if the client has an email in their profile it is copied to the clipboard.
WhatsApp	Opens share toward the chat.

The file is **always** saved locally: if Mail or WhatsApp do not open, the snackbar shows the path.

Formats:

Format	Plan	Content
Compact table (PDF)	Athlete Pro+	More exercises per page: GIF, YouTube QR, sets/rest. Instructions and silhouettes after the table, with the same # number.
Illustrated table (PDF)	Athlete Pro+	One row per exercise: Gym Visual GIF, YouTube QR (search “name + exercise”), muscle silhouettes, notes/description/execution

Format	Plan	Content
		beside the silhouette. Column header repeated on every page. No extra instruction appendix.
Program manual (PDF)	Pro Plan / Studio	Extended routine: GIF, silhouettes, tips and descriptions; same # numbering as the table.
HD image	Pro Plan / Studio	PNG ready for WhatsApp chat (same File / Email / WhatsApp picker).

Every PDF shows **KINEVA FIT** and the tagline *Fitness & Workout Planner* (studio logo if set in Settings). File names stay safe even if the routine title contains **/**. Circuits expand child exercises. If the profile has areas of attention, warnings stay visible on the row.

Manage mode (multi-select)

In the bar under the header (next to *Expand groups / Show exercises*) tap **Manage**:

1. Select one or more **routines** (checkmark on the card) or an **entire group**.
2. At the top, 「**X Selected**」 appears.
3. Available actions:
 -  **Send to Watch** — sends all selected routines to the wrist (Athlete Pro+; see §7).
 - **Select all** — select/deselect the whole list.
 - **Delete** — removes selected routines and/or groups.
4. Tap **×** to leave Manage mode.

Note: with **2 or more routines** the app uses a batch send (one transfer); if it fails, it automatically retries one routine at a time.

“on Watch” badge

After a successful send (Delivered or Queued), the card shows the **on Watch** badge.

If you delete the routine on the watch, the badge disappears on the iPhone too (automatic sync on launch if the Watch is reachable).

Free plan limits (summary)

Limit	Free
Active routines	1
Groups	1
Exercises per routine	max 15
Oversized templates	blocked on import
Advanced manual editor	limited
Distance / GPS exercises	No (Athlete Pro+ only) — editor, templates, import, and runner open the paywall

4. Athlete profile / clients

- Enter profile details, optional measurements, sport.
- **Areas of attention:** pick generic limitations (e.g. “knee discomfort”); the app flags poorly suited exercises and can **hide them** in selection (Athlete Pro+).
- **Free and Athlete Pro:** a single personal profile (“Me (Default)”). **You cannot** create additional clients (drawer has no “New client”; paywall if attempted).
- **Pro Plan / Studio & Gym:** trainer area with PIN, client drawer, duplicate, routine distribution (**Pro: max 8 clients; Studio: unlimited**; at the Pro limit an invite to Studio appears). Earlier Pro subscribers before the limit may keep unlimited clients (grandfathered).

Full trainer/gym operational manual: **§13** below.

4bis. Plans and subscriptions (summary)

Plan	Clients	Indicative price	Notes
Free	1	€0	1 routine, 15 exercises; no distance/GPS, Watch, PDF, multi-client

Plan	Clients	Indicative price	Notes
Athlete Pro	1	€4.99/month · €49.99/year (-17%)	Distance/GPS (define + run), map, Watch, editor, routine PDF, 3 AI credits
Pro Plan	max 8	€19.99/month · €199.99/year (-17%)	Trainer area, PIN, batch routines, JSON/PDF/WhatsApp, exercise DB, PDF encyclopedia, catalog backup, client CSV, 50 AI credits
Studio & Gym	unlimited	€49.99/month · €499.99/year (-17%)	Everything in Pro + mobility/posture protocols, custom limitations, rehab routines, JSON sharing with colleagues, 150 AI credits
Pilates Pack (add-on)	—	€9.99 one-time	Pilates catalog (mat + machine, 29 exercises). Not included in Athlete / Pro Plan / Studio: requires Athlete Pro+ and a separate purchase

- On the paywall the **annual plan is the default**: one payment, equivalent to **2 months free** (~-17%). Monthly remains available.
- **Pilates Pack**: non-consumable IAP (`com.mauroferrari.FITPlus.pilates`). Menu item `New Routine` → `Pilates Pack` (next to Mobility Protocols). Without Athlete+ the item shows the requirement; with the plan but without the pack it opens the in-app store.
- **7-day free trial**:
- **App Store (end users)**: Apple/Google introductory offer — tied to the Store account; **does not** renew by uninstalling. Guide: `TRIAL_STORE_VS_LOCALE.md` .
- **Development / pre-release testing**: builds with `ENABLE_DEV_MENU` (or debug) still keep a **local** trial to exercise Pro without the Store; do not use that build for the Store.
- Anyone already on **Pro Plan** before the 8-client limit keeps unlimited clients (grandfathered).
- Prices and renewals are handled by the App Store / Google Play; legal details in the EULA.

5. Routine editor

- Add exercises from the library.
- Configure sets, reps, load, rest, methods (Pro plans).

- **Distance measure (km) / GPS: Athlete Pro+** only (item locked with paywall on Free).
 - Circuits / supersets / T21 where available.
 - Save: the routine appears on Home.
-

6. Runner (workout)

- Start the routine → timer, rests, skip, exercise list.
 - Routines with distance exercises: **Athlete Pro+** only (Free → paywall on start).
 - Area-of-attention notices when applicable.
 - At session end: summary and save to history.
-

7. Apple Watch

Requirements: **Athlete Pro** plan (or active trial), KINEVA FIT installed on iPhone **and** Apple Watch, Bluetooth on, watch paired.

After installing KINEVA FIT on the Watch from the iPhone **Watch** app, **open KINEVA FIT on the watch at least once** before sending routines (so iPhone and Watch connect via WatchConnectivity).

Send a single routine

1. From **Home**, ⋮ menu on the routine → **Send to Apple Watch**.
2. Message: *Delivered* (Watch reachable) or *Queued* (open the Watch app to receive it).
3. **on Watch** badge on the iPhone card.

Send multiple routines (batch)

1. Home → toolbar → **Manage**.
2. Select the routines (or an entire group).
3. Tap the  icon at top right.
4. Wait for the summary (e.g. "3 routines sent to Apple Watch").

On the Watch

1. Open the **KINEVA FIT** app on the watch.

2. **Tap routine** → exercise preview → **OPEN**.
3. On the runner: **START** (voice guide: exercise → 3-2-1 → Go).
4. **NEXT** advances to the next set/exercise (or skips rest).
5. During the exercise the **next** step appears at the bottom.
6. **Pause**: single tap on the screen; **Resume**: double tap (the PAUSE badge does not cover the back button).
7. Complication: **KINEVA FIT** only (HR/workout). If “KINEVA Intervals” still appears under FIT, it is leftover: delete and reinstall the Watch app (`WATCH_COMPLICATIONS_ICONS.md`).

iPhone ↔ Watch badge sync

On launch, if the Watch is reachable, the iPhone aligns **on Watch** badges with the routines actually present on the watch. Delete a routine on the Watch → the badge disappears on the iPhone too.

8. AI and photo import

- **AI Wizard**: generates routines (uses credits).
 - **Photo import**: photograph a paper routine; always verify the result.
 - Requires connectivity and available credits.
-

9. Calendar and history

- Schedule recurring sessions.
- Review volume, sessions, exercise detail.
- PDF/image/JSON export on plans that allow it (see §13 for WhatsApp delivery and batch).
- **Branding in documents**: PDF (compact/illustrated table, technical manual, encyclopedia), image export, and history reports always show the name **KINEVA FIT**, the tagline *Fitness & Workout Planner*, and the app logo; if in Settings (Trainer) you uploaded a studio logo, that replaces the KINEVA FIT icon in the header.
- **Personal cloud archive (Athlete Pro / Pro Plan / Studio)**: Settings → Base → *Save history and charts (cloud)* / *Restore history from archive* (also ZIP icon in History). Export: ZIP with JSON/CSV/PNG. Import: Merge or Replace from ZIP/ `history_full.json` . Free plan: locked (paywall).
- **Trainer catalog backup (Athlete Pro+)**: Settings → Trainer tools → *Create full backup* / *Restore from backup* — JSON with custom exercises and mobility protocols.

10. Useful settings

- Language, audio/vibration, units.
 - Smart Swap toggle, screenshot mode (only if needed).
 - Backup/export (enabled plans).
 - Subscription management / paywall.
 - **Licensed devices:** Settings → Base. Athlete Pro / Pro Plan: **2** concurrent devices; Studio & Gym: **3**. Apple Watch does not count. If an iPad stays Free after “Restore purchases”, open the list and deactivate another device. The cap follows the Store Apple ID (even with a different iCloud). Sharing the account at the gym beyond the cap is not allowed.
-

11. Common issues

Problem	What to do
“KINEVA FIT not installed” message but the icon is on the Watch	After install from the iPhone Watch app, open KINEVA FIT on the Watch once , then resend the routine (iOS sometimes still reports “not installed”). Close and reopen KINEVA FIT on the iPhone if needed.
Watch does not receive the routine	Watch app installed on both devices, Bluetooth on, open KINEVA FIT on the Watch, resend
Multi-send fails partially	Retry with fewer routines; verify Pro plan; check “X sent, Y failed” message
Wrong “on Watch” badge	Open the app on iPhone with Watch on and nearby (manifest sync); or resend the routine
Template blocked (Free)	Too many exercises or already 1 routine/group → Pro
Disclaimer not acceptable	Open Privacy + EULA and check both boxes
iOS file_picker build	<code>flutter build ios --config-only</code> if SPM stays on iOS 13

12. Support and privacy

Legal docs: `docs/legal/README.md` (owner: Mauro Ferrari; publish on `maufer58.github.io/KINEVA-FIT_Policy`).

Contact: privacy/support email listed in the Privacy Policy.

App Store publication: `APP_STORE_CHECKLIST.md` · QA `qa/checklist_collaudo.md` · ops security (producer) `SECURITY_OPS_REMAINING.md` .

13. Trainer area, Studio & Gym (Pro Plan+)

Section for personal trainers, gyms, and studios. Requires **Pro Plan** or **Studio & Gym** (`enableTrainerArea`). On iPad the experience is optimal for routine catalogs and client delivery.

13.1 Access and security

1. **Settings** → **Trainer/Studio tools** (card at the bottom of the Trainer Pro tab).
2. If you lack the right plan → paywall.
3. **4-digit PIN (required on Pro/Studio)** after the first managed client: protects clients, database, and export. You can also enable Face ID / Touch ID. After inactivity or backgrounding the app asks for the PIN again. When you set the PIN you receive an **8-digit recovery code**: keep it; if you forget the PIN you use it once to unlock (then set a new PIN). Disable only with PIN `0000` (not recommended if you manage third-party clients).
4. **Studio branding**: business name, email, and logo — appear on PDF, encyclopedia, and export images.
5. **Routine sharing (JSON)**: selective export to other devices includes only the client **id and name** (not email, phone, conditions, or biometrics), plus the routines and custom exercises needed.

13.2 Client management

Action	Where	Notes
New client	Drawer → <i>New client</i>	Locked on Free/Athlete; Pro max 8, Studio unlimited

Action	Where	Notes
Edit profile	Tap client → profile	Conditions, sport, biometrics, goals, mobility protocols (Studio)
Duplicate (single)	Client menu → <i>Duplicate</i>	Copies profile + routines; “(Copy)” suffix
Duplicate (batch)	Admin Panel → <i>Duplicate clients</i>	Multi-select; sport/limitations/mobility options
Delete (batch)	Admin Panel → <i>Delete clients</i>	The “Me (Default)” profile cannot be deleted
CSV export	Admin Panel → <i>Export history/biometrics</i>	Biometrics CSV, session history, distance split per client

13.3 Bulk routine management

Master profile: build routines on the “Me (Default)” profile — templates, advanced techniques, T21.

Tool	Admin Panel / Settings	What it does
Assign master routines	<i>Assign master routines</i>	Select master routines/groups → clone to N clients (independent IDs; each clone tracks the source routine). Option <i>Assign and send PDF</i>
Batch routine management	<i>Batch routine management</i>	Flat / by athlete / by routine view: search, archive, or multi-delete; optional BCC email
Client routine cleanup	Trainer tab → <i>Client routine cleanup</i>	Delete obsolete routines across profiles (season change)
Multi-client JSON import	<i>Import client routines (JSON)</i>	Import a file exported by a colleague; choose destination clients; inject custom exercises

13.4 Delivering routines (app, WhatsApp, PDF, JSON)

Inside the app (KINEVA FIT client): assign from the master profile or send a routine already on the client → **SENT** badge / **on Watch** badge (Delivered / Queued / Error).

Multi send to the wrist (athlete): from the client profile Home, **Manage** mode → select routines →  icon (Athlete Pro+).

File / Email / WhatsApp channel (same picker as Home, see §3): the file is always copied locally, then the chosen channel's share sheet opens.

Format	Plan	Use
Compact table PDF	Athlete Pro+	Many exercises per page; instructions and silhouettes after the table
Illustrated table PDF	Athlete Pro+	Gym Visual GIF, YouTube QR, silhouette and copy on the same row
Full manual PDF	Pro Plan / Studio	Extended routine with GIF, tips, and descriptions
HD image	Pro Plan / Studio	PNG for WhatsApp chat
Batch JSON	Pro Plan / Studio	<code>batch_transfer</code> file with routines + custom exercises — importable by anyone using KINEVA FIT
Bulk PDF export	Pro Plan / Studio	<i>Deliveries & backup:</i> PDFs generated in parallel per routine; sequential share per client (email privacy) via File / Email / WhatsApp

After *Assign and send PDF*, PDFs of **newly created clones** are found via the link to the master routine (not by title alone), so duplicate titles do not confuse the export.

The athlete or a colleague with KINEVA FIT imports the JSON and picks destination profiles; custom exercises are added to the local catalog.

13.5 Exercise database and customization

Admin Panel → **Exercises:** search (standard vs custom), create/edit/delete.

- **New exercise:** muscles, equipment, type, difficulty, notes, setup.
- **Per-exercise limitations:** medical icon → conditions for which the exercise is not recommended.
- **Global limitations:** *Limitations* — customizable catalog of conditions/motor limitations.
- **Muscles / equipment / types:** *Manage muscles, equipment, types* — extend the master catalog.
- **Mobility protocols (Studio):** *Mobility protocols* — rehab/mobility sequences assignable to clients.
- **Pilates Pack (Athlete+ add-on):** mat + machine catalog (29 exercises) via **New Routine** → **Pilates Pack**. One-time purchase €9.99; **not** included in Studio or Pro Plan.

13.6 Profile ↔ exercise safety

1. Set **areas of attention / conditions** in the client profile.
2. In **exercise selection** enable “**Hide unsuitable**” (default): conflicting movements disappear from the list.
3. In the **runner session:** area-of-attention banner if a borderline exercise remains.
4. On **PDF and export images:** visual warnings for incompatibilities.
5. **Smart Swap:** during the workout replace an exercise while staying on the same muscle group.

13.7 PDF encyclopedia (full manual)

Admin Panel → **Export manuals (PDF)** — same File / Email / WhatsApp channel as the routine:

- Segments: Upper body · Lower · Core · Mobility · **Full encyclopedia** (entire database — long operation, needs plenty of RAM).
- Each exercise sheet includes: **Gym Visual GIF** (first frame), **YouTube QR** (movement search), muscle silhouettes, description, execution, equipment, not recommended for.
- The full catalog includes GIFs (they are no longer skipped).
- Studio logo in the header; useful for reception and staff training.

13.8 Backup and restore

Type	Content	Plan
Catalog JSON backup	Custom exercises + mobility protocols	Athlete Pro+

Type	Content	Plan
History ZIP archive	Sessions, CSV, chart PNGs	Athlete Pro+
Personal JSON export	Current profile + routines	Athlete Pro+
Colleague sharing	Batch JSON export/import or catalog backup	Pro / Studio

Catalog restore: merge exercises and protocols without deleting the rest. ZIP archive: *Merge* or *Replace* history.

13.9 PT calendar and Watch

- **Trainer appointments** in the calendar (month/day view).
- **Apple Watch send:** single routine (⋮ menu) or **multiple** (Home → Manage → ). Session sync and analytics on iPhone; **on Watch** badge aligned with the watch's real content.

13.10 Permissions summary by plan

Feature	Free	Athlete Pro	Pro Plan	Studio
Multi-client	No	No	Yes (max 8*)	Yes (∞)
Distance / GPS (define + run)	No	Yes	Yes	Yes
Batch routines / batch JSON	No	No	Yes	Yes
PDF encyclopedia / HD WhatsApp	No	No	Yes	Yes
"Hide unsuitable" filter	No	Yes	Yes	Yes
Custom exercises (editor)	No	Yes	Yes	Yes
Editable mobility protocols	No	No**	No**	Yes
Pilates Pack (mat/machine catalog)	No	Yes***	Yes***	Yes***
Catalog backup / history ZIP	No	Yes	Yes	Yes

* Legacy Pro: unlimited clients. ** Pro: mobility if build has `ENABLE_MOBILITY` ; Studio: always. *** Requires **Pilates Pack** add-on purchase (€9.99); not included in the subscription.

14. Operational guide — menu paths (all features)

This section explains **how to use KINEVA FIT correctly** with menu paths.
Full version (with **Index** and **Reference guide**): guida_operativa_percorsi.md .

Bottom bar: Home · Calendar · Data · History · More (= Settings)
Legend: ... routine menu · ≡ drawer · plans in parentheses (Free / Athlete Pro / Pro Plan / Studio)

14.1 Orientation

What	Path
See who is in session	Home → role chip under the title (SUPERVISOR / TRAINER · Name / ATHLETE)
Change active client	Home → tap active client · or ≡ Drawer → tap client
Settings	More · or ≡ → More

14.2 Create a routine

Home → New Routine then choose:

Method	Menu item	Plan
Manual	Create Manual Routine → Editor → Save	Free limited; Athlete+ full
AI	Generate with AI (Gemini)	AI credits
Photo	Import Routine from Photo	AI credits
Template	Template Library	Free limits
Free	Free Workout	Same as editor
Mobility	Mobility Protocols	Studio
Pilates	Pilates Pack	Athlete Pro+ + purchased pack

Edit: Home → ... on the routine → Edit .

Duplicate / archive / delete: same ... menu.

Template: ... → Save as Template (not Free).

Multi management: Home → Manage → check routines/groups →  Watch / select all / delete → × .

Transfer exercises: Home → Transfer → select → COPY or MOVE.

14.3 Run a workout

1. Home → ► on the routine → Runner (timer, rests, next, list).
2. End of session → summary → save to **History**.
3. Early exit: Delete and exit · Finish now · Suspend.
4. Rerun / reset today: ... on the routine → Rerun / Reset today's run .

GPS run (Athlete Pro+): in the Editor use distance measure km → ► → GPS ON panel.

The track is saved in history (map) and, on iPhone, sent to **Apple Fitness / Health** at session end (workout + route).

Health consent (**write only**) is requested on **first app launch** and stays on by default. GPS asks for **location** only the **first time** you use it; later runs do not show the system sheets again. If it does not appear in Fitness: Settings → Health → Data Access → KINEVA FIT .

Free plan: cannot define or start distance exercises (paywall).

Privacy: More → Base → Save GPS route (on by default; if you turn it off, no map in history and no route in Fitness).

14.4 History and progress

Goal	Path
Session list	History → Filters (period, type) → tap card → detail
Filter athlete (gym)	History → Filter Athlete (Pro/Studio)
Charts / volume	Data → Workout / Bio tabs
Progress export	Data → : → Export progress (Athlete+)
Cloud ZIP archive	More → Base → Save history and charts (cloud)

14.5 Calendar and scheduling

Home → ⋮ routine → Schedule / Manage Dates

Calendar → day → PROGRAM / HISTORY / APPOINTMENTS

Calendar → + → New appointment (Pro/Studio)

14.6 PDF / WhatsApp export

Home → ⋮ → Share / Export → Export Program

→ format (compact/illustrated table · manual · HD image) → channel **File / Email / WhatsApp**.

14.7 Apple Watch

Home → ⋮ → Send to Apple Watch (one routine)

Home → Manage → select → 🕒 (batch)

On the Watch: KINEVA FIT → routine → OPEN → START → NEXT

14.8 Clients (Pro Plan / Studio)

Action	Path
New	☰ → New Client → Create (<i>form stays open; does not change the active client on its own</i>)
Registry	☰ → Client registry
Edit / duplicate / suspend	☰ → ⋮ on the client
Share with trainers	⋮ client → Share with trainers → X / CLOSE

14.9 Create and manage trainers (Studio & Gym · Supervisor)

1. More → Trainer Pro → Studio tools → (PIN) → Admin
2. **Trainer management** → + / Add trainer → name + PIN → save
3. Enable login, Suspend/Reactivate, Export, Delete (license seat with 30-day cooldown)
4. Login: overlay → choose profile (gear) → PIN on the on-screen keypad

Max 3 trainers/device + supervisor. Freeing “ghost” seats is not in the supervisor menu (producer black door only).

14.10 Admin Panel (summary)

More → Trainer Pro → Studio tools → [PIN] → Admin

- Studio branding · Exercise database · PDF encyclopedia
- Assign Master Routines · Massive management · Deliveries & Backup · JSON import
- Duplicate/Delete clients · History/biometrics CSV · Trainer management (Studio)

14.11 Subscription and settings

☰ / More → banner → paywall (plans, trial, Restore purchases)

More → Base → language, audio, GPS, theme, history archive

More → Trainer Pro → PIN, Smart Swap, catalog backup, Studio tools

Full detail: [guida_operativa_percorsi.md](#) .

14.12 Cheat sheet

I want to...	Path
Create a routine	Home → New Routine → Create Manual Routine
Work out	Home → ►
History	History → tap session
Charts	Data
PDF/WhatsApp	... → Share / Export
Watch	... → Send to Apple Watch
New client	☰ → New Client
New trainer	More → Trainer Pro → Studio tools → Trainer management → +
Subscription	Drawer/Settings banner
Session role	Chip under Home title
